On a hot summer day, a cool piece of watermelon is the best snack, which has been enjoyed for thousands of years. We may see them as a snack, but for people who live in the desert they mean safe water during the time of drought.

When we talk about watermelons, we think of something large and green with red flesh and lots of dark-brown seeds. But there are over one thousand and two hundred different kinds of watermelons grown in ninety-six countries. Some are small and round. Some have white, yellow, or orange flesh inside. Japanese farmers even planted square-shaped watermelons that can be easily put in the refrigerator. Seedless watermelons are becoming more and more common and popular although watermelon seeds can be eaten. However, not all the people like that because spitting seeds is part of the fun.

Summer would not be summer without cool watermelons. So use a spoon or your hands and enjoy the cool juicy fruit.
